

Thank you for purchasing Contacta's **Portable One to One Radio Frequency Kit**. This system uses radio frequency waves to improve communication for one-way transmission from one user to another.

Transmitter (RF-TX1): This is the transmission device. User 1 speaks into a connected microphone, or connects a music source, to send audio to the compatible receiver.

Receiver (RF-RX1): This is the listening device. User 2 uses this to hear audio sent by the transmitter.

Lapel Mic (RF-TX1-LM): Attach to the clothes of User 1 for handsfree communication.

Stereo Headphones (RF-HP1): Plug these into the receiver for clear, private listening.

Neckloop (RF-NL1): Provides direct, wireless sound from the receiver to Telecoil-enabled hearing instruments.

This kit is available in two frequency variants (865MHz and 915MHz).

Please scan the QR Codes on the next page to access the User Guides / Datasheets for each included product.
